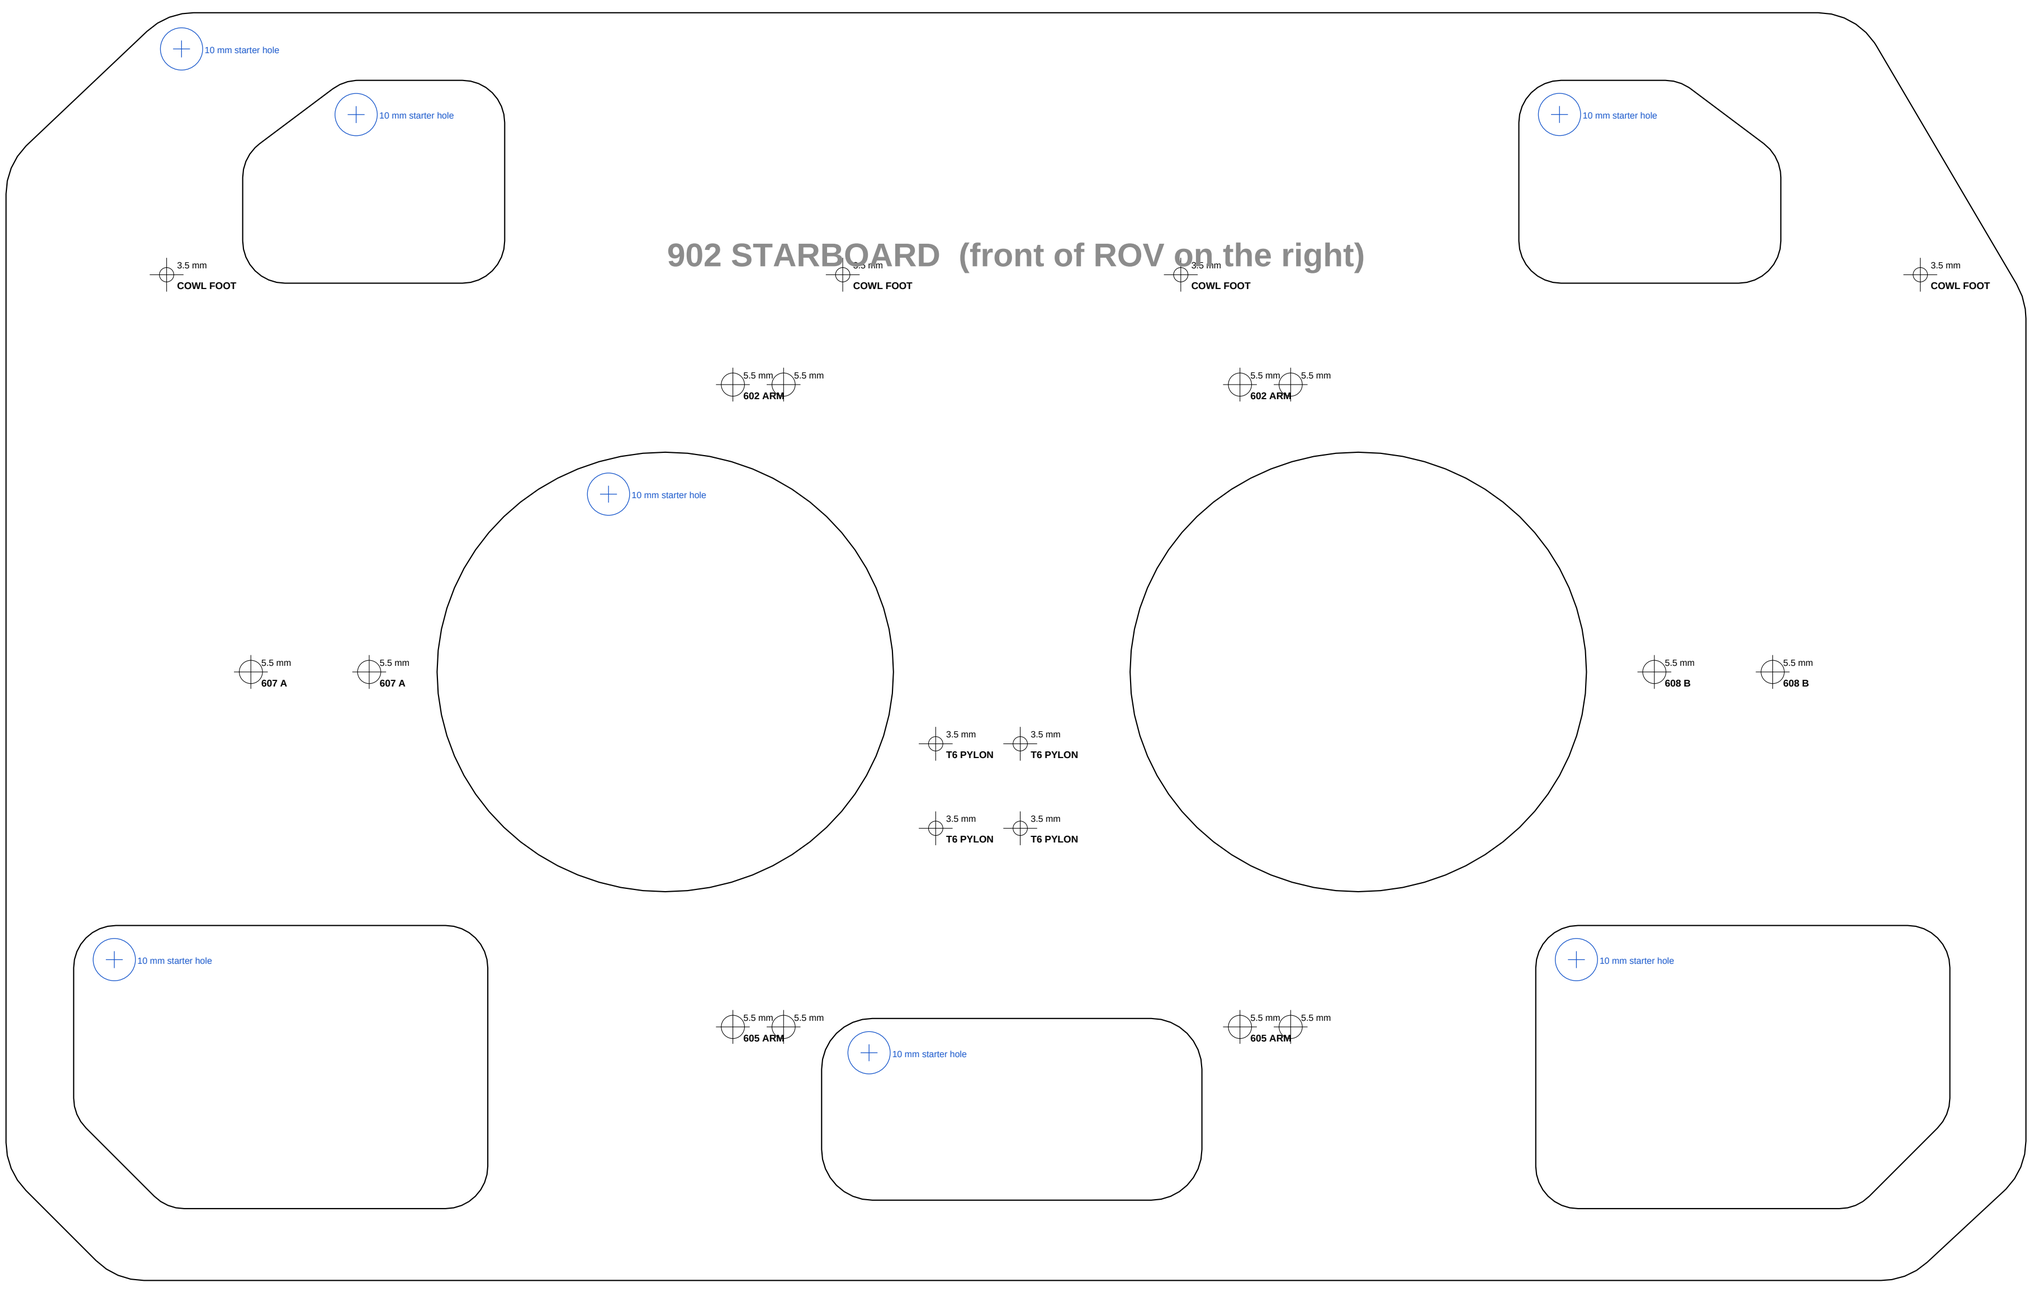
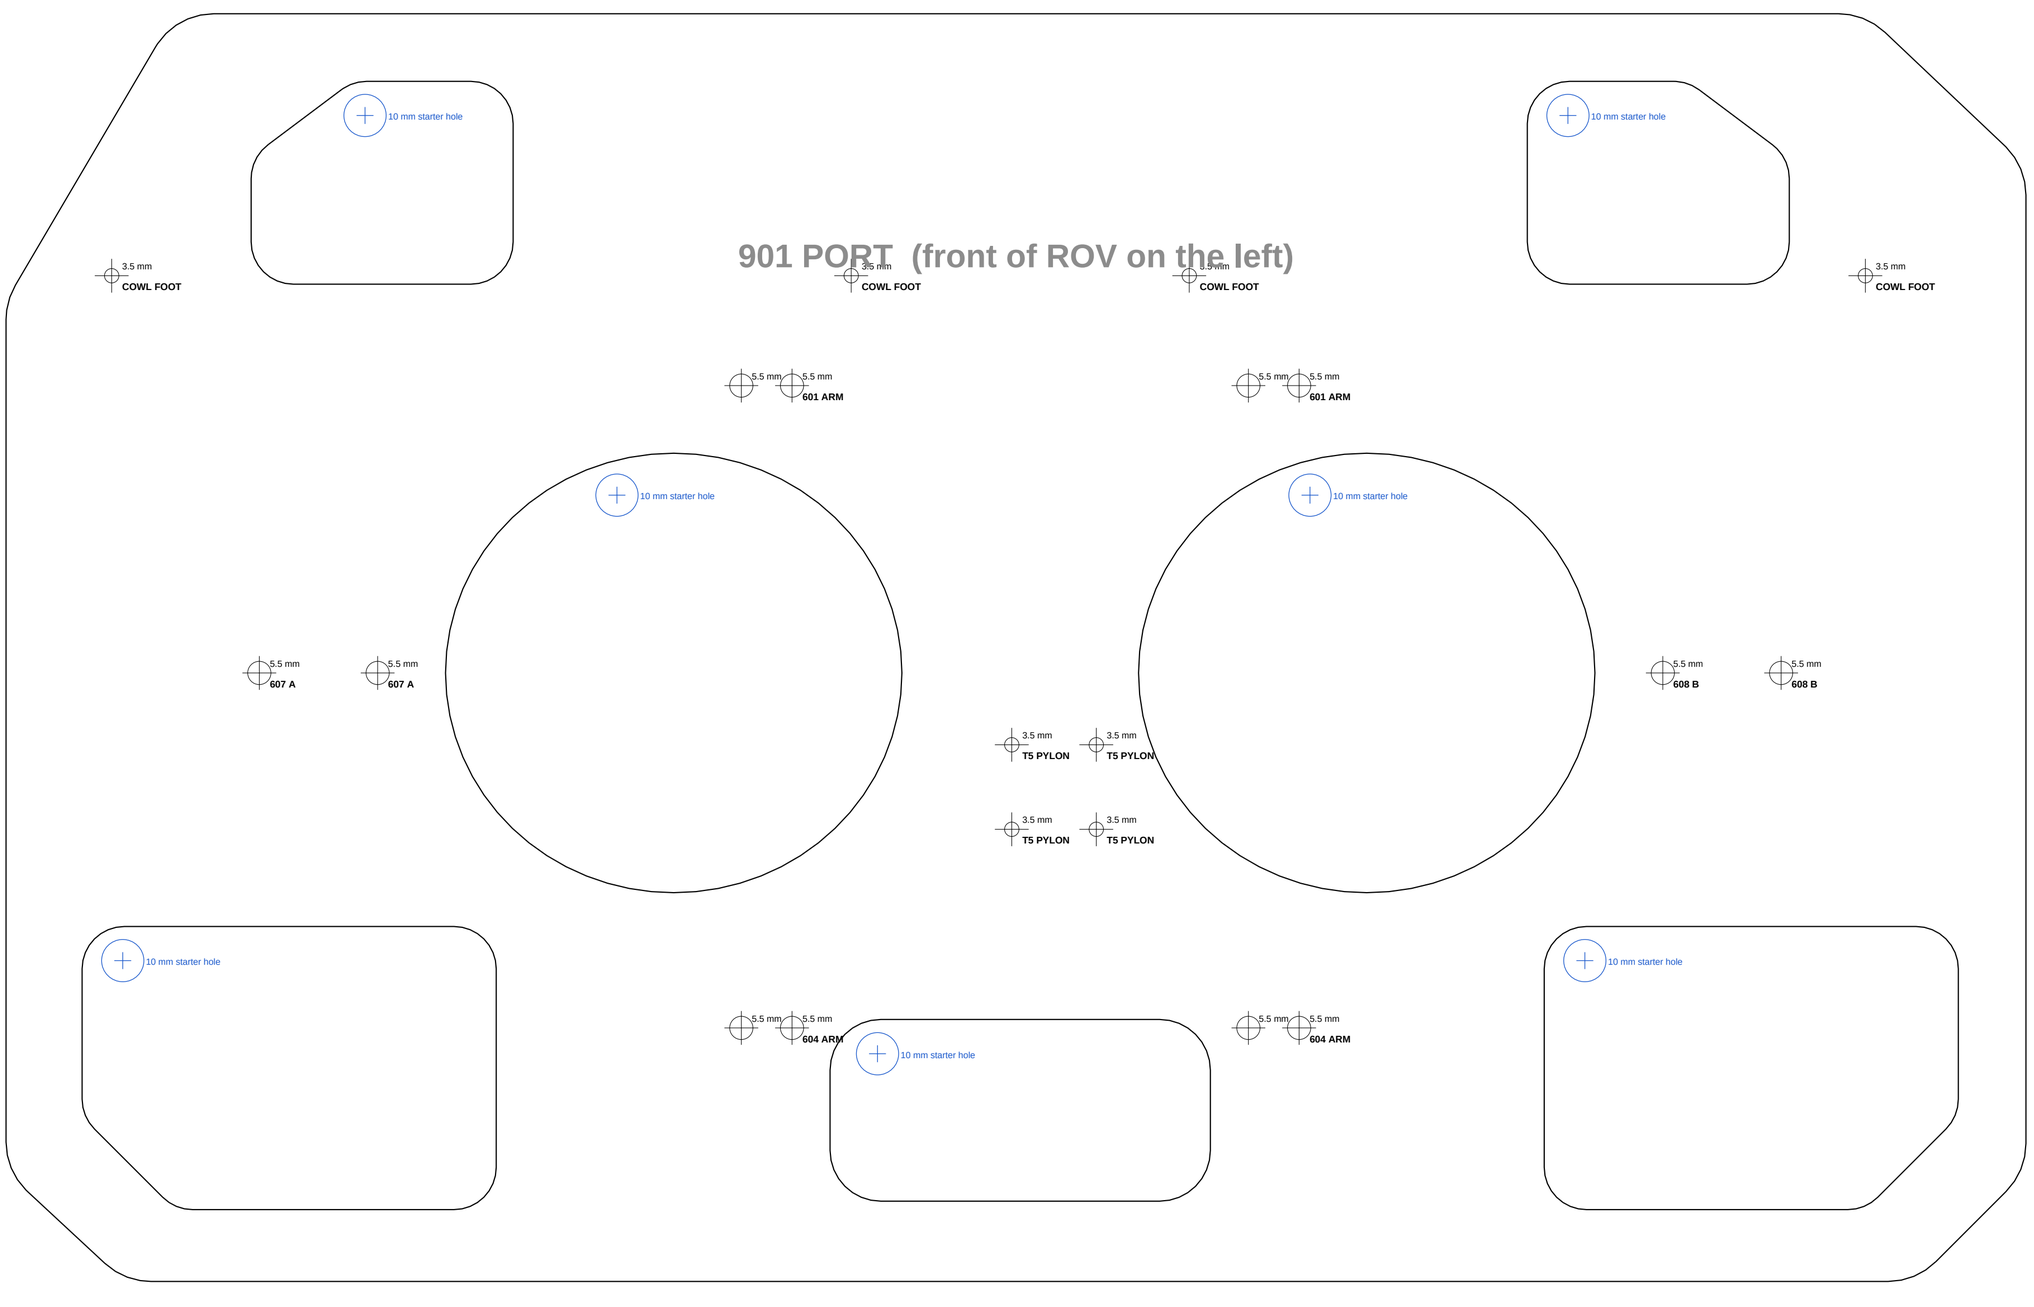
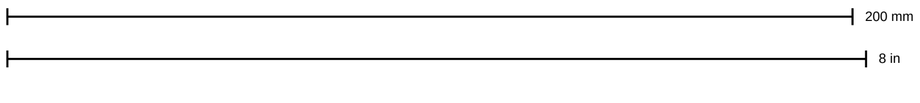
TinkerSub KB-1 side plates 901 + 902: full-size cutting template, both plates, 1/2 in HDPE






Print on 24 x 36 in (ARCH D) paper or a 24 in roll at 100 % / Actual size: no scaling, no 'fit to page'.
Before cutting anything, check both bars at the bottom: exactly 200 mm and exactly 8 in. Each plate outline must measure 478 x 300 mm.
Both plates are drawn outside face up, 4.8 mm apart, exactly as they sit on one 24 x 24 in HDPE sheet: trim the paper to about 2 mm
outside the two plates and glue the whole thing on (3M Super 77 or glue stick), plates centred left to right, ~2 mm from the top and bottom edges.
Centre-punch every crosshair. Drill 3.5 mm (M3), 4.5 mm (M4), 5.5 mm (M5) as printed. Drill each blue 10 mm starter hole, then jigsaw the windows
and outlines just outside the line, slow speed, fine blade. Mark 901 / 902 and the hole tags on the outside faces before peeling the paper off.
